## Senior Natural Products Scientist

### Description

The Frederick National Laboratory is a Federally Funded Research and Development Center (FFRDC) sponsored by the National Cancer Institute (NCI) and operated by Leidos Biomedical Research, Inc. The lab addresses some of the most urgent and intractable problems in the biomedical sciences in cancer and AIDS, drug development and first-in-human clinical trials, applications of nanotechnology in medicine, and rapid response to emerging threats of infectious diseases.

Our core values of accountability, compassion, collaboration, dedication, integrity, and versatility serve as a guidepost for how we do our work every day in serving the public's interest.

Position Overview:

### PROGRAM DESCRIPTION

The Frederick National Laboratory for Cancer Research (FNL) is a Federally Funded Research and Development Center (FFRDC) sponsored by the National Cancer Institute (NCI) and operated by the prime contractor Leidos Biomedical Research, Inc. FNL is responsible for pursuing a unique mission in translational and applied biomedical research that is unsuitable for academia, the pharmaceutical industry, or other federal contractors. This open position is ideally suited for a scientist who is interested in applied Research & Development. The selected candidate will join the Natural Products Support Group located at the NCI-Frederick campus.

The Natural Products Support Group provides scientific and technical support to the Developmental Therapeutics Program (DTP) of the NCI Division of Cancer Treatment and Diagnosis (DCTD). The group is comprised of several laboratories responsible for various natural product-based support activities including extraction of plant, microbial, and marine biota; pre-fractionation of natural product extracts; isolation and identification of biologically active natural products; performing cryopreservations and microbial fermentations; and in-vitro and in-vivo drug preparations.

### KEY ROLES/RESPONSIBILITIES

Performing a wide range of scientific support studies, with an increasing emphasis in the area of microbial secondary metabolites

Expanding the laboratory's research program focused on the fungal isolate collection including methods development for the fermentation and extraction of fungal cultures, as well as the isolation of biologically active natural products

Generating reports and publications in the areas of isolation and structural elucidation of natural products from marine, microbial, and plant sources using state of the art techniques

Maintaining chemistry laboratory instrumentation, including liquid chromatography systems, mass spectrometers, and an NMR spectrometer

Serving as a co-manager of the Natural Products Support Group

### BASIC QUALIFICATIONS

### Hiring organization

Frederick National Laboratory for Cancer Research

### Employment Type

### Date posted

October 18, 2020

Possession of a Doctoral degree from an accredited college or university in chemistry or a related discipline (foreign degrees will be evaluated for U.S. equivalency)

Minimum of five (5) years post-graduate experience of competent, innovative research in the field of specialty

Training and publications in the area of microbial natural products

Knowledge of fungal identification and fermentation techniques as well as extraction and isolation of secondary metabolites from fungi

Knowledge of state-of-the-art separation technologies for complex natural product extracts

Previous experience in supervision of technical laboratory personnel

Ability to work in a team environment

#### PREFERRED QUALIFICATIONS

Knowledge and experience with the screening of natural product extracts for bioactivity, especially high throughput screening of prefractionated natural product libraries

Knowledge of epigenetic processes for induction and isolation of microbial secondary metabolites.

Knowledge of natural product biosynthetic pathways

Experience in handling large data sample sets and merging various data streams from various sources
