Analytical Scientist II

Description

The role:

The Analytical Scientist II will develop and validate new analytical methods and perform standard chemical and physical analysis of inner and outer nutritional products in the Quality Control laboratory using wet chemistry techniques and instrumentation. This role will also provide technical support to cross-functional groups including Research and Development and Global Licensing and provide training to the junior chemists. This position initiates, evaluates plans, directs, executes, implements and reports on activities related to the development of new products, improvements or cost saving ideas. This position carries with it the responsibility to mentor team members and grow their capabilities for contributing to the organization while coordinating and running the efforts within the Lab environment.

How you would contribute:

- Evaluate, develop and validate new methods and procedures.
- Develop sophisticated test methods and serve as a technical expert in their respective areas.
- Implement industry's standard methodologies on laboratory techniques, methods or technology.
- Fuel innovative pipeline for quality control laboratory.
- Develop novel techniques and methodology.
- Submit publications or submissions to professional affiliates (e.g. USP, AOAC, etc.).
- Provide insight based on statistical data analysis, trending and/or reports.
- Collaborate with internal and external partners to resolve product or process issues. Collaborate with industry's specialists (e.g. by serving in a committee, etc.).
- Provide technical leadership to Herbalife (internal) and industry (external).
- Pro-actively lead cross functional team to seek issues and initiate continuous improvement activities.
- Demonstrate solid knowledge of current Good Manufacturing Practices (cGMP) and Good Documentation Practices (GDP). Document data in lab notebook and follow basic cGMP guidelines. Take active roles to ensure that laboratory is in compliance.
- Develop and run audit and compliance program to meet ISO17025 accreditation requirements (including statistical analysis of data).
- Conduct internal and external audit as needed.
- Perform additional duties as assigned.

Skills and background required to be successful:

- Bachelor of Science in Chemistry, Biochemistry or related scientific fields
- 10 years of analytical test method development and validation experience in the quality control laboratory of nutraceutical or pharmaceutical industry for
